

## Unit 7: Exponential Functions

### 7.2 Transformations of Exponential Functions

The general form of the exponential function  $f(x) = c^x$  ( $c > 0$ ) is  $f(x) = a(c)^{b(x-h)} + k$ .

Transformations applied the same as in unit 1.

| Parameter | Transformation                                                                                                                                                                                                                                                                   | Example |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| $a$       | <ul style="list-style-type: none"> <li>Vertical stretch about the <math>x</math>-axis by a factor of <math> a </math></li> <li>For <math>a &lt; 0</math>, reflection in the <math>x</math>-axis</li> <li><math>(x, y) \rightarrow (x, ay)</math></li> </ul>                      |         |
| $k$       | <ul style="list-style-type: none"> <li>Vertical translation up or down</li> <li><math>(x, y) \rightarrow (x, y + k)</math></li> </ul> <p><i>key</i><br/><math>y = k</math> is the horizontal asymptote</p>                                                                       |         |
| $b$       | <ul style="list-style-type: none"> <li>Horizontal stretch about the <math>y</math>-axis by a factor of <math>\frac{1}{ b }</math></li> <li>For <math>b &lt; 0</math>, reflection in the <math>y</math>-axis</li> <li><math>(x, y) \rightarrow (\frac{x}{b}, y)</math></li> </ul> |         |
| $h$       | <ul style="list-style-type: none"> <li>Horizontal translation left or right</li> <li><math>(x, y) \rightarrow (x + h, y)</math></li> </ul>                                                                                                                                       |         |

**Ex.** Sketch each graph, state domain, range, intercepts, and the equation of the horizontal asymptote:

a)  $y = 3(2)^{x-4}$

| $x+4$ | $3y$  |
|-------|-------|
| 1     | $3/2$ |
| 2     | $3/4$ |
| 3     | $3/2$ |
| 4     | 3     |
| 5     | 6     |
| 6     | 12    |
| 7     | 24    |
| 8     | 48    |

$y = 2^x$

| $x$ | $y$   |
|-----|-------|
| -3  | $1/8$ |
| -2  | $1/4$ |
| -1  | $1/2$ |
| 0   | 1     |
| 1   | 2     |
| 2   | 4     |
| 3   | 8     |
| 4   | 16    |

b)  $y = -\frac{1}{2}(2)^{\frac{2x+6}{2}} + 1$   
 $\quad \quad \quad \uparrow$   
 $\quad \quad \quad 2(x+3)$

| $\frac{1}{2}x - 3$ | $-\frac{1}{2}y + 1$ |
|--------------------|---------------------|
| -4.5               | $15/16$             |
| -4                 | $7/8$               |
| -3.5               | $3/4$               |
| -3                 | $1/2$               |
| -2.5               | 0                   |
| -2                 | -1                  |
| -1.5               | -3                  |
| -1                 | -7                  |

$D \{x | x \in \mathbb{R}\}$   
 $R \{y | y > 0, y \in \mathbb{R}\}$   
 $x\text{-int: none}$   
 $y\text{-int: } 3(2)^{0-4} = 3(1/16) = 3/16$   
 asymptote  $y = 0$

$D \{x | x \in \mathbb{R}\}$   
 $R \{y | y < 1, y \in \mathbb{R}\}$   
 asymptote  $y = 1$   
 $x\text{-int: } -2.5$   
 $y\text{-int: } -\frac{1}{2}(2)^{\frac{2(0)+6}{2}} + 1 = -\frac{1}{2}(64) + 1 = -31$

**Ex.** A cup of water is heated to 100 °C and then allowed to cool in a room with an air temperature of 20 °C. The temperature,  $T$ , in degrees Celsius, is measured every minute as a function of time,  $m$ , in minutes, and these points are plotted on a coordinate grid. It is found that the temperature of the water decreases exponentially at a rate of 25% every 5 min. A smooth curve is drawn through the points, resulting in the graph shown.

- a) What is the transformed exponential function in the form  $y = a(c)^{b(x-h)} + k$  that can be used to represent this situation?

25% decrease  $\rightarrow$  75% retention  $\rightarrow$  base  $\frac{3}{4}$   
 base function  $T = \left(\frac{3}{4}\right)^t \leftarrow t$  ~~time~~ 5 minute intervals  
 $T = \left(\frac{3}{4}\right)^{m/5}$

asymptote  
 $T = 20$   
 $\uparrow$   
 vertical displacement

no horizontal translation  
 - start at time 0

$T = a\left(\frac{3}{4}\right)^{m/5} + 20$   
 sub in a point (0, 100)  
 $100 = a\left(\frac{3}{4}\right)^{0/5} + 20$   
 $100 = a + 20$   
 $a = 80$

$$T(m) = 80\left(\frac{3}{4}\right)^{m/5} + 20$$

- b) Describe how each of the parameters in the transformed function relates to the information provided.

$a, b, h, k$

$a = 80$  Temp difference between initial cup temp & room temp

$b = \frac{1}{5}$  The time interval (5 mins) between 25% temp drops

$h = 0$  starting cooling process at time 0

$k = 20$  The air temp of room
